I bet you view source on web page hoping for secret messages too.

Warning: This card deck is not intended for production environments. Cards are (usually) not a replacement for professional security advice. Convince your board to hire, and then consult, a CISO before attempting any organizational digital security changes. ISO27001, PCI, CISSP, SAFETAG, OSSTMM, RFCs 1149 and RFC 2324, and a few other acronyms were all carefully considered. Good luck out there.

>MALICIOUS CONTENT_

Malicious Content is a card game for infosec professionals using a familiar ruleset combined with the nerdiest cards you've played with since that time you used a fantasy collectible card game deck to drive a punched card reader.
